                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-09-676-475A-199

Sequence 199, Application US/09676475A

Patent No. 6784153

GENERAL INFORMATION:
APPLICANT: Ruoslahti, Erkki
APPLICANT: Pasqualini, Renata
APPLICANT: Rajotte, Daniel
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE OF INVENTION: Membrane Dipeptidase
FILE REFERENCE: P-LA 4377
CURRENT APPLICATION NUMBER: US/09/676,475A
CURRENT FILING DATE: 1998-03-13
FRIOR FILING DATE: 1998-03-13
FRIOR FILING DATE: 1998-03-13
NUMBER OF SEQ ID NOS: 452
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 25, Application US/09483550B

Seed protein ws-5 - winged bean (fragment)
Species: Psophocarpus tetragonolobus (winged bean)
C;Species: Psophocarpus tetragonolobus (winged bean)
C;Date: 07-Oct-1994 #sequence_revision 07-Oct-1994 #text_change 07-Oct-1994
C;Accession: E61491
J. Protein Chem. 8, 115-130, 1989
A;Title: Microsequence analysis of winged bean seed proteins electroblotted from two-dim A;Reference number: A61491; MUID:89351606; PMID:2765119
A;Accession: E61491
A;Status: preliminary
A;Molecule type: protein
A;Residues: 1-7 <HIR>
C;Keywords: glycoprotein; seed

"Analysis of the herpes simplex virus type 1 promoter controlling the expression of Un.38, a true late gene involved in capsid assembly.";
J. Virol. 65:769-786(1991).
-!- FUNCTION: Component of the basal layer in which the capsids are embedded. Binds DNA.
-!- SIMILARITY: Belongs to the herpesviruses VP19C family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

The skin peptide profile as a probe for the study of evolutionary trends of amphibians.";

Aust. J. Chem. 49:955-963(1996).

-- FUNCTION: May act as a neuromodulator or neurotransmitter.

-- SUBCELLULAR LOCATION: Secreted.

-- TISSUE SPECIFCITY: Expressed by the skin dorsal glands.

-- TISSUE SPECIFCITY: Mw=965; METHOD=FAB; RANGE=1-7; NOTE=Ref.1.

Amidation; Amphibian defense peptide; Direct protein sequencing; Neuropeptide; Pyrrolidone carboxylic acid.

Cendron A; Stacker S, Hughes RA, WPI; 2001-442248/47. Achen MG,

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

Cadherin-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
```

```
involves administering a phage display library to a subject, and identifying expressed peptides which home to the desired organ or tissue, e.g. brain, kidney, angiogenic vascular tissue or tumour tissue. The isolated peptides (see AAW13412-52, AAW11181-86) can be used to target e.g. drugs, toxins or labels to the selected organ/tissue (claimed) or to identify and/or isolate target molecules (claimed). The peptides can be directly identified in vivo, as compared to prior art in vitro screening specificity in vivo
                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

This sequence was identified by using in vivo panning to screen a library of potential organ homing molecules. The present sequence can be used to direct a molety to a kidney tissue, by linking the moiety to the present sequence. Examples of potential moieties are drugs, toxins or a detectable label
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peptides by in vivo peptides linked to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an enriched library fraction containing molecules that selectively home to a selected organ or tissue such as grain, kidney or tumour recovered by in vivo panning. The invention contains an extend of invivo panning for identifying a molecule that homes to a specific organ. The molecules, e.g., peptidies, peptidomimetics, proteins and fragments of proteins contained in an enriched library fraction may be administered to a subject as part of a pharmaceutical composition to freat disease or in diagnostic methods. The present sequence is a peptide standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enriched library fraction comprising molecules recovered by in vivo panning that selectively home to a selected organ or tissue useful for treating disease or in diagnostic methods.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method of recovering molecules that home to a selected organ or tissue. The method comprises administering to the subject the library of diverse molecules, collecting a sample of the selected organ or tissue (e.g. brain or kidney), and recovering from the sample several molecules that home to the selected organ or tissue. The method is useful for identifying molecules, particularly useful for screening large number of molecules (e.g. peptides), that home to a specific organ. The identified molecule is useful for e.g. raising an antibody specific for a target molecule, targeting a desired moiety (e.g. drug, toxin or detectable label) to the selected organ. Specifically, the method is useful for identifying the presence of cancer in a subject by linking an appropriate moiety to a tumour homing molecules that method provides a direct means for identifying molecules that specifically home to a selected organ and, therefore provides a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              significant advantage over previous methods, which require that a molecule identified using an in vitro screening method subsequently be examined to determine if it maintains its specificity in vivo. AAU10724-AAU10738 represent kidney homing peptides described in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recovering molecules that home to an organ or tissue, useful for identifying molecules that home to a specific organ or tissue, e.g. identifying a tumor homing molecule to identify the presence of cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Targeting ligand; bioactive agent; polymer matrix; cancer; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                            Organ targeting; tissue targeting; cancer; tumour homing molecule; delivery of target molecule; kidney homing peptide.
Kidney homing peptide #1 useful for delivery of target molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 31; DB 5; Length 7; Pred.                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a composition comprising a bioactive agent homogeneously dispersed in a targeted matrix (polymer and targeting ligand, Also included are a targeted matrix for use as a delivery vehicle comprising a polymer associated with a targeting ligand, enhancing the bioavailability of an agent comprising administration of the composition. The method is useful for targeted delivery of a drug, especially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides are disclosed including cathepsin-D spetides targeting receptors in the brain and kidney, peptides targeting the RGD (Arg-Gly-Asp)-motif in, e.g., antibodies, peptides targeting the angiogenic endothelium of solid tumours, tissue specific peptides (e.g. of lung, skin, pancreas, intestine, uterus, adrenal gland and retina), and cathonic cancer targeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes a chimeric retrovirus envelope protein

(1) comprising an ecotropic envelope protein and a heterologous short
peptide ligand inserted within the ecotropic envelope protein. Also
described: (1) a nucleic acid molecule comprising a sequence encoding the
recombinant chimeric envelope protein; (2) a vector comprising a nucleic
acid sequence encoding the chimeric envelope protein; (3) a recombinant
retroviral particle comprising a chimeric envelope protein comprising a
heterologous short peptide ligand; (3) altering retroviral tropism; (4)
dentifying a nucleic acid sequence encoding the chimeric envelope
protein that alters viral tropism; (5) delivering a nucleic acid sequence
to a cell; and (6) treating cancer. (1) has cytostatic activity and can
be used in gene therapy. The chimeric retrovirus envelope protein is
useful for treating cancer, which comprises providing a cancer cell; e.g.
human cancer cell and infecting the cancer cell with a virus, e.g.
retrovirus comprising the chimeric envelope protein comprising a
retrovirus comprising the chimeric envelope protein comprising a
certovirus comprising the chimeric envelope protein comprising a
cocding thymidine kinase. The present expensents a kidney cell
certovirus comprising the cancer cell with a virus, e.g.
crargeted peptide ligand and a therapoutically useful
certovirus comprising the cancer cell with the exempleication of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New chimeric retrovirus envelope protein comprising an ecotropic envelope protein and a heterologous short peptide ligand inserted within the ecotropic envelope protein useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               chimeric retrovirus envelope protein; ecotropic envelope protein; cytostatic; gene therapy; cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present interior an execution and a heterologous short peptide ligand inserted within the ecotropic envelope protein. Also described: (1) a nucleic acid molecule comprising a sequence encoding the recombinant chimeric envelope protein; (2) a vector comprising a nucleic acid sequence encoding the chimeric envelope protein; (3) a recombinant cerrorisal particle comprising a chimeric envelope protein; (3) a recombinant retroviral particle comprising a chimeric envelope protein comprising a heterologous short peptide ligand; (3) altering retroviral tropism; (4) identifying a nucleic acid sequence encoding the chimeric envelope protein that alters viral tropism; (5) delivering a nucleic acid sequence con a cell; and (6) treating cancer. (I) has cytostatic acidity and can be used in gene therapy. The chimeric retrovirus envelope protein is cuseful for treating cancer, which comprises providing a cancer cell, e.g. human cancer cell and infecting the cancer cell with a virus, e.g. custorius comprising a cherrologous short peptide ligand and a therapeutically useful gene, e.g. encoding thymidine kinase. The present sequence represents a kidney cell carget and peptide, which is given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                          New chimeric retrovirus envelope protein comprising an ecotropic envelope protein and a heterologous short peptide ligand inserted within the ecotropic envelope protein useful for treating cancer.

                                                                                                                                                                                                                                                                 The invention relates to a method for in vivo panning of a library to identify molecules that specifically home to a selected organ. The method is useful for screening large numbers of molecules, e.g. peptides to identify those that can home to selected organs. It can facilitate recovery or identification of the molecule. The present sequence is a kidney homing peptide derived form phage peptide display library. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a
Obtaining molecule that homes to selected organ involves administering library of diverse molecules to subject, collecting the sample of the selected organ, and identifying the molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAU04531 standard; peptide; 6 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               VEGF based monocyclic peptide 9.
```

```
method of producing a monomeric monocyclic peptide by a measuring beta-
beta carbon separation distances on opposite antiparallel strands of a
cyclising the peptide by oxidiaing the cysteine residues. The monocyclic
cyclising the peptide by oxidiaing the cysteine residues. The monocyclic
cyclising the peptide with at least one amino acid deleted prior
cyclisation are used to interfere with angiogenesis.

to cyclisation are used to interfere with angiogenesis.

covascularisation or lymphangiogenesis in a mammal with a condition
condition is diabetic retinopathy, poriasis, arthropathy,
chemangioma, vascularised malignant or benign tumour, post-recovery
cerebrovascular accident, post-angioplasty restenosis, head, heat or cold
crauma, substance-induced neovascularisation of the liver, excessive
correction. The peptides are also used to modulate vascular permeability
in a mammal (the mammal has a condition characterised by fluid
accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura,
or brain. The peptides are used to image blood vessels and lymphatic
vasculature. The monomeric and bicyclic peptides are used to interfere
cor brain. The peptides are used to image blood vessels and lymphatic
vasculature. The monomeric and bicyclic peptides are used to interfere
cor brain. The peptides are used to image blood vessels and lymphatic
vasculature. The monomeric and bicyclic peptides are used to interfere
cor brain intended in combination with an anti-inflammatory agent, to treat a
chronic inflammation, especially rheumatoid arthritis, psoriasis and

amelioration of adisease or disorder associated with aberrant B
lymphocyte stimulator (BLyS), BLyS receptor expression or activity; cells
of haematopoietic origin; or proliferative disease; and reducing,
inhibiting or stimulating immunoglobulin production, B cell proliferation
and graft rejection involving administration of BLyS binding polypeptides.
The BLyS binding polypeptides are used in the treatment, prevention or
amelioration of diseases such as immune system diseases, proliferative
diseases, diseases of cells of hematopoietic origin, graft rejection,
hypergammaglobulinaemia, blood clotting disorders, inflammatory disorders,
hypergammaglobulinaemia, blood clotting disorders, ischaemia, and
neurodegenerative diseases. The present sequence is a B lymphocyte
stimulator protein binding peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B Lymphocyte Stimulator protein; B Lymphocyte Stimulator binding peptide; BLyS; biological fluid; serum; plasma; lymph; blood; urine; spinal fluid; synovial fluid; saliva; mucus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New B-lymphocyte stimulator binding polypeptide useful in detecting or isolating BLyS or BLyS-like polypeptide comprises a specified amino acid
                                                                              The treatment of various diseases e.g. rheumatoid arthritis, comprises administering B Lymphocyte stimulator binding polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a B Lymphocyte Stimulator (BLyS) binding polypeptide. BLyS binding peptides bind BLyS or BLyS-like proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                  present invention relates to the treatment, prevention or
                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 28; DB 5; Length 7; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin-15; T-cadherin; pB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoglein; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAS can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g.
reversibly or irreversibly. The binding peptides are used in detection, isolation and/or purification of BLyS in a solution such as water or a buffer solution, as wall as any fluid and/or cell obtained from an individual biological fluid, body tissue, body cell, cell line, tissue culture or other source containing BLyS or BLyS-like polypeptides. The biological fluids sera, plasma, lymph, blood, blood fraction, urine, synovial fluid, spinal fluid, asaliva and muccus. Sequences ABG33465-33415, ABG33463-33848-33848-33848-33850 and ABG33852-13862 represent BLyS binding peptides of the invention
                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cadherin-7 cell adhesion recognition cyclic peptide SEQ ID NO:1375.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                           6

mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cangiogenesis in a mammal, inhibiting apoptosis in a nonclassical cadhering approach of the correct of the contral nervous system, treating a demyelinating neurological disease, blood vessel regression in a mammal, enhancing delivery to the contral nervous system, treating a demyelinating neurological disease, contral nervous system, treating a demyelinating neurological disease, contral nervous system, treating a demyelinating synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for correducing sor directing neurite outgrowth, facilitating wound healing or reducing sor directing neurite outgrowth, facilitating wound healing or reducing sor a tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psortasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psortasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. ANY64572 to AAY64512 represent specifically claimed peptides, and can also be used for detection and diagnosis and in bioreactors. AAY6652 to AAY64512 represent specifically claimed peptides, and can also be used for treating e.g. psortasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psortasis, and in bioreactors. AAY6652 to AAY64513 and AAX33188 to AAX33188 to AAY64513 and described in a decomplete of the contraction of the correction of the contraction of the contraction of the contraction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin, cadherin-15; cadherin-6; cadherin-7; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-16; adherin-15; T-cadherin; PB-cadherin; protocadherin; cadherin; cadherin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.

```
The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cecognition (CAR) sequence. The MAs can be used for modulating of

nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

cangiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing drug delivery to the

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

crelated macular degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diagnosis and in bioreactors.

ANY6652 to AAX64572 represent specifically claimed peptides, and

ANY6652 to AAX64572 represent specifically claimed peptides, and

ANY66531 to AAX653186 represent sequences used in
New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the exemplification of the present invention

```
The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for edge of the conclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting stimulating central nervous system, treating a demyelinating neurological disease,

conclassing vasopermeability in a mammal. Heny can also be used for conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal. They can also be used for treating adhesion of foreign tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diapense and in bioreactors.

ANY6652 to AXX64572 represent specifically claimed peptides, and can in the conclaimed peptides, and can be conclaimed to the conclaimed peptides and can be conclaimed to the cancer in a mammal. They can also be used for detection and diagnosis and in bioreactors.

ANY6652 to AXX64572 represent specifically claimed peptides, and cancer in the case of the cancer in the case of the case
                                                                                                                                                                                                                                                                                                                        New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3971, Application US/10395032

Publication No. US20030229199A1

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: Symonds, James Matthew

APPLICANT: Gour, Barbara J.

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS

FILE REFERENCE: 1000086.407C9

CURRENT PAPLICANTON NUMBER: US/10/395,032

CURRENT FILING DATE: 2003-03-21

NUMBER OF SEQ ID NOS: 4052

SEQ ID NO 3971

LENGTH: 7

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cendron A; s RA, Stacker S, monocyclic peptide, used to interfere with angiogenesis, lesis, is produced by cyclizing a peptide loop fragment loop of a growth factor protein by oxidizing the cysteine

2; 102pp; English.

resents a monomeric monocyclic peptide of the invention, and structure is modelled on the expose loop of human endothelial growth factor). The invention relates to a cing a monomeric monocyclic peptide by a measuring beta-ration distances on opposite antiparallel strands of a

peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, covacularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, corebrovascular accident, post-angioplasty restenosis, head, heat or cretebrovascular accident, post-angioplasty restenosis, head, heat or cretebrovascular accident, post-angioplasty restenosis, head, heat or cretebrovascular accident, post-angioplasty restenosis, head, heat or cremma, substance-induced neovascularisation of the liver, excessive of hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability accumulation in pertipheral limbs or in lungs, peritoned by fluid accumulation in peripheral limbs or in lungs, peritoned or cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic or brain. The peptides are used to image blood vessels and lymphatic or with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a channer is relationally rheumatoid arthritis, psoriasis and diabetic retinopathy

Identification of targeting peptides that can be used to treat diseases e.g. cancer and arthritis, by the BRASIL (Biopanning and Rapid Analysis of Selective Ligands) method comprises a single differential centrifugation step.

Example 5; Page 75; 167pp; English.

```
of Selective Interactive Ligands) to obtain a targeting peptide. The Interactive Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a phage car display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating disease states, such as: diseases, inflammatory arthritis; atherosclerosis; cancer; autoimmune disease; bacterial infection; viral infection; cardiovascular disease and degenerative disease. The present amino acid sequence represents a

have cytostatic, immunosuppressive, anti-inflammatory, antiarthritic, antiatherosclerotic, antidabetic, antibacterial and antiviral activities. The methods and composition are useful for identifying targeting peptides and one or more receptors for a targeting peptide. The targeting peptides are used for selective delivery of therapeutic agents, including gene therapy vectors and fusion proteins, to specific organs, tissues, or cell types in subject. The targeting peptide may also be used for treating diseases such as diabetes mellitus, inflammatory diseases, arthritis, atherosclerosils, cancer, autoimmune diseases, bacterial and viral infections and Hodgkin's disease. The present sequence represents a targeting peptide of the invention

Active immunization against angiogenic proteins, useful for treating e.g. tumors and inflammation, particularly contains vascular endothelial growth factor or its receptor.

Disclosure; Page 18; 53pp; Spanish.

The invention relates to an active immunization against angiogenic proteins comprising administration of a vaccination composition (A), optionally containing an adjuvant, that comprises polypeptides (I) directly associated with an increase in angiogenesis, their variants, or

```
their encoding polynucleotides (II). Angiogenesis-associated polypeptides are: members of the vascular endothelial growth factor (VBGF) family, especially the 121, 165 or 189 isoforms of VEGF-A, the 167 isoform of C VBGF-B, or VEGF-C or -D; a (co-) receptor of VBGF, particularly VEGFR-I, -C 2 or -3; NRP-1 or -2 (members of the neuropilin family); or placental C G growth factor. (A) is used for treatment or prevention of tumors in mammals, particularly humans but also farm animals and pets, also many other conditions associated with excessive angiogenesis, specifically other conditions associated with excessive angiogenesis, specifically confirmention, autoimmunity and eye diseases (claimed). Among the diseases that may be treated are arthritis, endometriosis, arteriosclerosis, that may be treated are arthritis, endometriosis, arteriosclerosis, psoriasis, infections diseases (hepatitis and Kaposi sarrooms), diabetes, psoriasis, rheumatodid arthritis, thyroiditis, diabetic retinopathy, transplant rejection, macular degeneration, neovascular glaucoma, confirmed and angiofibroma. The method destroys cells that are the source of angiogenic proteins, rather than just neutralizing the activity of source of angiogenic proteins rather than just neutralizing the activity of such proteins (as in passive immunization). This sequence represente an immunisation peptides of the invention derived from the VEGF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of one or more amino acids required for interaction with a ligand, to generate a model of the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defining motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound libraries for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Producing compound library, by generating biological target model using target sequence information, defining microenvironments interacting with ligand and motifs interacting with microenvironment, and assembling
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Compound library; microenvironment; G-protein Coupled Receptor; GPCR.

The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of gene or more amino acids required for interaction with a ligand, to generate a model of the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defining motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound library for synthesis. The novel method is useful to produce compound libraries for screening natural ligands such as peptides and proteins or for producing chemical peptide of a G-protein Coupled Receptor (GPCR) including Endothelin BT-A receptor, which relates to the novel compound library production method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing compound library, by generating biological target model using target sequence information, defining microenvironments interacting with ligand and motifs interacting with microenvironment, and assembling
natural ligands such as peptides and proteins or for producing chemical compounds based on drug motifs for screening. This sequence represents peptide of a G-protein Coupled Receptor (GPCR), which relates to the novel compound library production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compound library; microenvironment; G-protein Coupled Receptor; GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                            G-protein coupled receptor endothelin BT-A receptor peptide #68

The present invention describes a method for screening a ligand library (LL). The method comprises: (a) contacting the LL with an anti-target (IL). The method comprises: (a) contacting the bind to the AT; (b) separating unbound ligands with a selected target (T) to allow binding of unbound ligands with a selected target (T) to allow binding of unbound ligands with a selected target (T) to allow binding of unbound ligands to (T) to form a (T)-bound ligand (C) from ligands which do not bind (T); and (e) identifying (T)-bound ligands on (C). The method can be used for screening a ligand library, e.g., a library of peptides, polypeptides on orligonucleotides. A ligand (I) identified by the method can be used in a cleaning therapeutic or personal care application. The method is preferably useful for identifying peptide application. The method is preferably useful for identifying peptide complications, which involves contacting peptides application, which at target which is a stain such as porphyrin derived stain, and that target which is a stain such as porphyrin derived stain, and the attain soil-based derived stain, and with the stain to form stain-bound peptide complex and identifying the stain-bound peptide complex. A selective targeting method for screening a library of ligands that bind to a target under harsh conditions. The stain-bound peptide complex. A selective targeting method may be used to creen and identify a ligand useful for therapeutic intervention, e.g., a library of ligands may be used to creen and identify a ligand useful for therapeutic intervention, e.g., a library of ligands may be used to creen and identify a ligand useful for the sugeting method may be used to identify a tumour-bound ligand. The selective targeting conditions of the exemplification of the present invention. (Updated on 29-AUG-2003 to the exemplification of the present invention. (Updated on 29-AUG-2003 to the the exemplification of the present invention.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Screening ligand library comprises allowing binding of ligand with antitarget, contacting unbound ligands with selected target to form target-bound ligand complex and identifying target bound ligands on the complex
                                                                                                                                                                                                                                      Human; tumour necrosis factor alpha; TNF-alpha; VEGF; detergent; stain; bacteriophage; phage library; vascular endothelial growth factor; collar soil; polyurethane; egg; tea; hair; skin; cleaning composition.

The invertion may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a novel polypeptide encoded by an alternative

antibody capable of recognising at least a portion of a chemokine binding receptor, where the antibody also recognises a portion of a chemokine binding receptor, where the antibody also recognises a peptide of the sequence of the modulator), a vaccine formed with the antibody and method for producing an antibody (by inducing formation of antibody against a chemokine modulator, where the cartibody is also capable of recognising a chemokine binding receptor). The method, therapeutic agents and compositions are useful for treating a disease modulated through and/or caused by binding of a chemokine to a chemokine receptor, e.g. primary and secondary inflammation, allergy, non coptimal immune response, autoimmune reaction, allograft rejection, diabetes, sepsis, cancer, any type of malignant cell growth, acute and chronic bacterial and viral infections, arthritis, colitis, psoriasis, chronic bacterials, hypertension or reperfusion lechaemia. The present sequence is a modulatory chemokine-binding peptide of the invention binding chemokines MCP-1, SDF-lalpha, MIG, eotaxin and interleukin-8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in interinction claims to peptical composition of the amino acids histidine (H), serine (S), alanine (A), leucine (L), solution (H), serine (S), alanine (A), leucine (L), and ceaturing at least 2 Histidines spread along said molecule, where the molecule features an overall positive charge (family 1) or a molecule composed of the amino acids H, P, T, L, R, Tryptophan (W), phenylalanine (F), and featuring at least two neighbouring histidines, where the molecule features an overall positive charge (family 2) and/or a molecule (F), and featuring at least two neighbouring histidines, where the comprising a peptide having an amino acid sequence from a list, given in the specification. Also included are a composition for treating a condition involving abnormal cell migration in a subject (comprising a therapeutic agent for administering to the subject, where therapeutic agent for administering to the subject (where therapeutic agent in a subject (by administering the therapeutic agent), an antibody for binding a chemokine receptor in a subject (by administering the therapeutic agent), an antibody for binding a chemokine binding receptor (comprising the binding the bin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New peptidic chemokine modulators for modulating a biological effect of chemokine, useful for treating a condition involving abnormal cell migration in a subject, e.g. inflammatory condition, or cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an immunogenic peptide composition comprising 9 residues including a first conserved residue at a second bosition from Neterminus, and a second conserved residue at C-terminal position. The inventive peptide composition is used to elicit an immune response against a desired antigen for preventing, treating or diagnoshing pathological states, e.g. prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, cytomegalovirus (CWV), and condlylloma acuminatum. It is also used to treat autoimmune associated disorders, e.g. multiple sclerosis, rheumatoid arthritis, sjogren syndrome, scleroderma, polymyositis, dermatomyositis, systemic lupus erythematosus, juvenile rheumatoid arthritis, ankylosing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated polypeptide comprising leptin-related OB3 peptide sequence capable of modulating body mass, useful for treating or preventing obesity, Type II diabetes mellitus or hyperglycemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated polypeptide (I) comprising a leptinrelated OB3 peptide sequence, where at least one of the amino acid is in the D-isoform. The polypeptide reduces food intake and blood glucose. This sequence corresponds to amino acids 116-123 of the mouse leptin
spondylitis, myasthenia gravis (MG), bullous pemphigoid, pemphigus, glomerulonephritis, Goodpasture's syndrome, autoimmune hemolytic anemia, Hashimoto's disease, pernicious anaemia, idiopathic thrombocytopenic purpura, Grave's disease, and Addison's disease. The invention defines positions within a motif enabling the selection of the peptides, which will bind efficiently to human leukocyte anitgen (HLA) A2.1. This is the amino acid sequence of an immunogenic HLA-A2.1 binding peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anorectic; antidiabetic; anabolic; body mass modulator;
insulin release modulator; leptin; OB3 peptide; food intake reduction;
blood glucose reduction; mouse.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a pharmaceutical composition (PI) comprises a carrier and a peptide (AI) capable of binding an HLA-A2.1 molecule and carrier and a peptide (AI) capable of binding an HLA-A2.1 molecule and carrier and a peptide (AI) capable of binding an HLA-A2.1 molecule and composition (CI) comprising an immunogenic peptide having an HLA-A2.1 binding motif and 9 residues selected from either first conserved creations and second conserved residues selected from V, I, I, A and M at the carbon-terminal position; or first conserved residue selected from L, I, A and M at the C-terminal position; and a composition (C2) comprising an immunogenic peptide having an HLA-A2.1 conserved residue selected from A or M at the C-terminal position; and a composition (C2) comprising an immunogenic peptide having an HLA-A2.1 conserved residue selected from I, I, V, A, or T at the second position from the CC residue selected from I, I, V, A, or T at the second position from the CC reminal position. I'A, I, V, A, or T at the second position from the CC reminal position. The first and second conserved residue selected from V, I, I, A or M CC at the C-terminal position. The first and second conserved residues are separated by 7 residues. Also disclosed are new peptides capable of binding aelected major histocompatibility complex (MHC) molecules and conducting an immune response. The pharmaceutical compositions are useful for the treatment of human viral diseases (c) prostate cancer, hepatitis B, hepatitis C, AlDS, renal carcinoma, cervical carcinoma, cutoimmune diseases, and to relieve the symptoms of, treat or prevent the cocurrence or reoccurrence of autoimmune diseases e.g. multiple sclerosis (MS), rheumatoid arthritis, Sjogren syndrome, scleroderma, polymyositis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antinflammatory; neuroprotective; antirheumatic; antiarthritic; dermatological; muscular; nephrotropic; antianaemic; thyromimetic; haemostatic; anabolic; hypertensive; antianaemic; thyromimetic; haemostatic; anabolic; hypertensive; antianaemic; thyromimetic; haemostatic; anabolic; hypertensive; antianaemic; thyromimetic; major histocompatibility complex; MHC; human viral disease; major histocompatibility complex; MHC; human viral disease; headitis B; hepatitis C; AIDS; renal carcinoma; cervical carcinoma; lymphoma; cytomegalovirus; condylyloma acuminatum; cancer; autoimmune disease; multiple sclerosis; rheumatoid arthritis; systemic lupus erythematosus; julymyositis; dermatomyositis; systemic lupus erythematosus; julymyositis; dermatomyositis; ankylosing spondylitis; myasthemia gravis; bullous pemphigoid; pemphigus; glomerulonephritis; Goodpasture's syndrome.

```
The invention relates to a novel isolated, synthetic or recombinant peptide or polypeptide which includes one or more endothelial cell peptide of the invention has anticumous, cytostatic, vasotropic, antipporiatic, dermatological, cumour, cytostatic, vasotropic, antiarthritic, vulnerary, antiulcer, copthalmological, antidiabetic, antiarthritic, vulnerary, antiulcer, copthalmological, antidiabetic, antiarthritic, vulnerary, antiulcer, copthalmological, statistic, antiarthritic, vulnerary, antiulcer, copthalmological, statistic, antidiabetic, antiarthritic, vulnerary, antiulcer, copthalmological, antidiated, and promote proliferation and/or migration of the endothelial cells, by treating the cells with an ECBP aggonist, which is preferably the peptide, to promote proliferation and/or migration of the treated cells, and for reducing or promoting angiogenesis, by treating the cells with an ECBP antagonist, which is preferably the peptide of the invention is also useful for manufacturing a medicament for promoting angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing or reducing
                                                                                                                                                                                                                                                                                                                                                          ö
dermatomyositis, systemic lupus erythematosus, juvenile rheumatoid arthritis, ankylosing spondylitis, myasthenia gravis, bullous pemphigoid, pemphigus, glomerulonephitis, Goodpasture's syndrome, autoimmune haemolytic anaemia, Hashimoto's disease, pernicious anaemia, idiopathic thrombocytopenic purpura, Grave's disease, and Addison's disease. The compositions are capable of specifically binding glycoproteins encoded by HLA-A2.1 allele and inducing T cell activation in T cells restricted by the A2.1 allele. This is the amino acid sequence of a poly-A-binder peptide used for HLA-A2.1 binding assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel synthetic or recombinant polypeptide useful for promoting, reducir proliferation and/or migration of endothelial cells, and for modulating angiogenesis, has endothelial cell binding protein sequences.
                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to an active immunization against angiogenic proteins comprising administration of a vaccination composition (A), optionally containing an adjuvant, that comprises polypeptides (I) directly associated with an inorease in angiogenesis, their variants, or their encoding polynucleotides (II). Angiogenesis-associated polypeptides are: members of the vascular endothalial growth factor (VGGF) family, especially the 121, 165 or 189 isoforms of VGGF-A, the 167 isoform of VGGF, or VGGF-C or -D, a (CO-)receptor of VGGF, particularly VGGFR-1, 2 or -3; NRP-1 or -2 (members of the neuropilin family); or placental growth factor. (A) is used for treatment or prevention of tumors in mammals, particularly humans but also farm animals and pets, also many other conditions associated with excessive angiogenesis, specifically
                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Active immunization against angiogenic proteins, useful for treating e.g. tumors and inflammation, particularly contains vascular endothelial growth factor or its receptor.
angiogenesis. ECBP sequences are useful to alter the infectivity spectrum of a viral particle. The present sequence represents an ECBP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antiangiogenic; cytostatic; antiinflammatory; immunosuppressive; ophthalmological; gynecological; antiarteriosclerotic; virucide; hepatotropic; dermatological; anti-HIV; antidabetic; antipsoriatic; antirheumatic; antiarthritic; antithyroid; immunization; angiogenesis; vascular endothelial growth factor; VEGF; neuroplin; placental growth factor; tumor; neoplasias; metaetases; inflammation; autoimmunity; eye disease; arthritis; endometriosis; arteriosclerosis; edema; hepatitis; Kaposi sarcoma; diabetes; psoriasis; rheumatoid arthritis; thyroiditis; diabetic retinopathy; transplant rejection; macular degeneration; neovascular glaucoma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated polypeptide comprising leptin-related OB3 peptide sequence capable of modulating body mass, useful for treating or preventing obesity, Type II diabetes mellitus or hyperglycemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated polypeptide (I) comprising a leptin-
related OB3 peptide sequence, where at least one of the amino acid is in
the D-isoform. The polypeptide reduces food intake and blood glucose.
This sequence corresponds to amino acids 116-124 of the mouse leptin
malignant or benign neoplasias (and their metastasss), acute or chronic inflammation, autoimmunity and eye diseases (claimed). Among the diseases that may be treated are arthritis, endometriosis, arteriosclerosis, edema, infectious diseases (hepatitis and Kaposi sarcoma), diabetes, psoriasis, rheumatoid arthritis, thyroiditis, diabetic retinopathy, transplant rejection, macular degeneration, neovascular glaucoma, hemangioma and angiofibroma. The method destroys cells that are the source of angiogenic proteins, rather than just neutralizing the activity of such proteins (as in passive immunization). This sequence represents an immunisation peptides of the invention derived from the VEGF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   anorectic; antidiabetic; anabolic; body mass modulator;
insulin release modulator; leptin; OB3 peptide; food intake reduction;
blood glucose reduction; mouse.
